Effective Data Visualization for the Data-Driven Organisation

November 26 -30, 2018

The amount and complexity of data produced in the business world is increasing at a staggering rate. The amount of information is overwhelming, not because there is too much of it but because we do not know how to tame it. Data visualization through charts and graphs has been a preferred way of mining and communicating business insights and information. Though the time spent on the creation of charts has reduced due to the proliferation of software and tools, a majority of these charts fails to convey the intended message because they are not designed well. This programme focuses on the tools and techniques in data visualization to leverage data; including correctly designed static charts and dynamic interactive visualizations. The programme would help decision-makers to quickly examine large amounts of data, expose trends and issues efficiently, exchange ideas with key players and influence the decisions that will ultimately lead to success.

The participants of the programme will learn design practices for visualization along with visualization as a means of data analysis and communication. Ample hands-on sessions and demos will help the participants not only grasp the fundamentals of business data visualization but also expose them to the cutting edge tools in this area.

Among others, participants will learn to:

- Design graphics and tables better to convey the intended message
- Understand visual perception and its applications to quantitative communication
- Perform exploratory analyses to generate and test business hypotheses
- Design effective dashboards
- Convey a story using data

Programme Highlights

The following topics will be covered (but will not be limited to) in the programme:

- Correct usage of tables versus graphs
- Seven important quantitative relationships in business graphs
- Visual perception and its application to quantitative information
- Best practices of graph design
- Exploratory data analysis
- Interactive graphics
- Creating effective dashboards
- Constructs for advanced analysis
- Story-telling using graphics

Participants' Profile

This programme is intended for all those whose work requires them to make sense of quantitative business data. It is ideal for practitioners, managers and decision-makers who want to use data visualization for better decision -making and in-depth understanding of information using hands-on techniques and related business cases to understand the concept.

Methodology

The teaching methodology for this programme will be an appropriate mix of classroom teaching, hands-on experiments, case discussions, identification of best practices, in-class participation, group exercises/ presentations and guest lectures.
